Database Backup and Retention Policy

Document ID: DOC-003

Owner: Database Engineering

Status: Active

Version: 4.1

Last Updated: 2025-08-10

Environment: Production

Purpose

This policy defines minimum backup requirements for production databases operated by NexusScale.

Backup Schedule

Tier-1 production databases must generate incremental backups at least every six hours.

A full recoverable backup must be generated once every seven days.

Backup jobs are monitored by the Database Engineering team and failed backup operations must generate an alert for on-call review.

Retention

Unless an approved regulatory or customer exception applies, production database backups must remain recoverable for a minimum retention period of thirty calendar days.

Backup artifacts older than the required retention period may be removed by the centralized lifecycle management service.

Encryption

All backup artifacts containing customer data must be encrypted both at rest and during transfer to the backup repository.

Testing

Each Tier-1 database service must complete a restoration test at least once per calendar quarter.
